CREATE DATABASE FROM NEW DESIGN

The hidden command Ctrl-alt-shift-T in BOS's main interface opens a special version of the Teach function. This special version creates a SEPARATE database containing (only) the design that you teach. Note that there must exist a main.bin at the start of this function!

The database will bear the name of the card design and it can later on be merged with the main.bin via the Add Design function (Ctrl-alt-shift-A).
